

## Smart Money

Viva Kittery's very own "on the economy" reporter..Clyde McNoodle..is reporting on a new upcoming trend that with the " help" of AI will be surprisingly promising for consumers and savers alike!

Smart Money is soon to become the new way! People just need a little help said the AI interpreter ... Smart Money... is the new card that replaces all cards period. It interacts with AI continually to monitor.. suggest..and prevent spending habits that are either illegal or illogical!

The card puts any purchase on hold while AI interprets the purchase and either rejects it or offers " other" suggestions.. or sends you a link to get to another store where that purchase would be cheaper. !@

Its awesome if nothing else McNoodle remarked.

McNoodle was chosen to use the beta version of the card before its spread out into the community. Here are a few of the awesome benefits..

I was at a local store buying the regular assortment of groceries for the week. As the scanner was humming away and the total reached \$384.22.. the phone rang ..call listed ss AI GROCER ASSISTANT!

I answered and an argumentative voiced AI said .."What the hell are you doing?"

The voice said I'm sending you links to get these products cheaper before I ..or AI.. approves your purchase.

There's no choice really.. so you have to say OK..Or the phone keeps ringing and the purchase is rejected.

From here the journey began. I raced from store to store saving from 4 cents to 84 cents per purchase. The weird part was when I was sent to the ocean to get steamed clams for "free"!

I could have been home in ten minutes from the local store but I got home around 6 hours later as it were.

AI sent approval codes and showed me I saved \$16.34.. but AI took the money and put it into an IRA account automatically ..

In the end i was so exhausted by AI grocer assistant I didn't want to shop anymore ... but three days later the phone rang again..

The voice said.. Its time to buy the doughnuts!
